

SAFE-PCI for Women

PCI Ratio and International Sites

Sunil V. Rao MD

DCRI

Duke University Medical Center

 **Duke** Clinical Research Institute

Current enrollment and metrics

■ As of 6/1/2012

- 591 patients
- 216 known PCIs (36.5%)
- 29 unknown

■ Issues

- What if the proportion of 67% is not met?

Increase overall enrollment

Hold steady (RIVAL diagnostic data)

- How to prospectively identify high-probability patients?

International sites – why or why not?

Why?

- Rapid enrollment
- More planned PCI
- Extends the reach of ACC internationally
- Gateway to international QI, other opportunities

Why not?

- QI not a priority OUS
- “What’s in it for us?”
- Costs associated with joining NCDR*

*If CathPCI interface is used
